Health Profile 2014

Health in summary

The health of people in Stockport is varied compared with the England average. Deprivation is lower than average, however about 16.4% (8,500) children live in poverty. Life expectancy for men is higher than the England average.

Living longer

Life expectancy is 10.8 years lower for men and 8.4 years lower for women in the most deprived areas of Stockport than in the least deprived areas.

Child health

In Year 6, 17.1% (450) of children are classified as obese, better than the average for England. The rate of alcohol-specific hospital stays among those under 18 was 73.8*, worse than the average for England. This represents 45 stays per year. Levels of breastfeeding are worse than the England average. Levels of GCSE attainment are better than the England average.

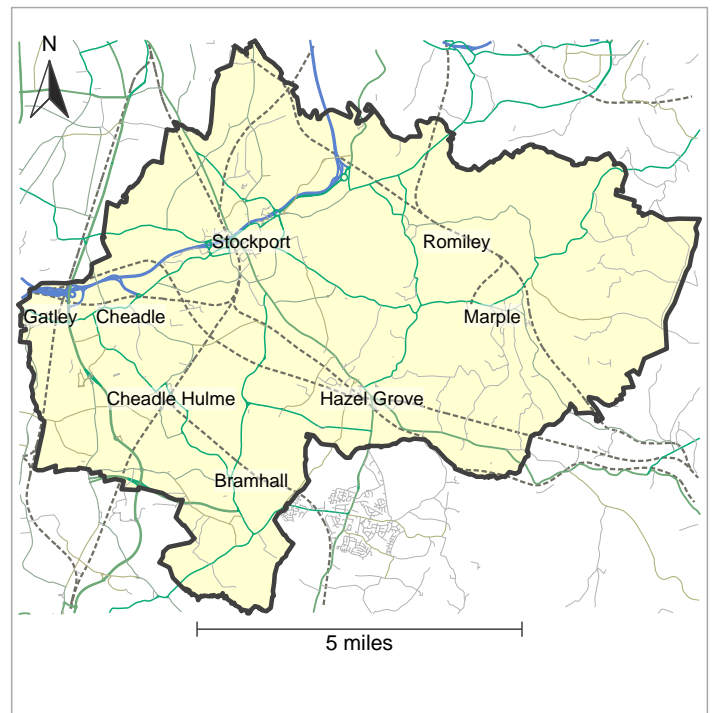

Adult health

In 2012, 21.5% of adults are classified as obese. The rate of alcohol related harm hospital stays was 651*. This represents 1,812 stays per year. The rate of self-harm hospital stays was 212.1*, worse than the average for England. This represents 591 stays per year. The rate of smoking related deaths was 290*. This represents 475 deaths per year. Rates of sexually transmitted infections, people killed and seriously injured on roads and TB are better than average. Rates of statutory homelessness, violent crime, long term unemployment and drug misuse are better than average.

Local priorities

Priorities in Stockport include reducing consumption of, and harm related to, alcohol; improving and promoting mental wellbeing and resilience at all ages; reducing health inequalities by giving children a healthy start and promoting walking and cycling to increase physical activity. For more details see www.stockport.gov.uk and <http://stockportccg.org>

Deprivation: a national view

The map shows differences in deprivation levels in this area based on national quintiles (fifths) of the Index of Multiple Deprivation 2010 by Lower Super Output Area. The darkest coloured areas are some of the most deprived areas in England.

This chart shows the percentage of the population in England and this area who live in each of these quintiles.

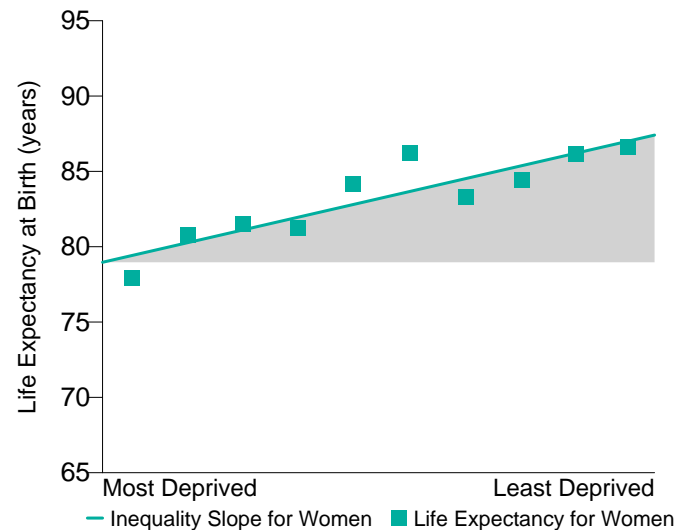

Life Expectancy: inequalities in this local authority

The charts below show life expectancy for men and women in this local authority for 2010-2012. Each chart is divided into deciles (tenths) by deprivation, from the most deprived decile on the left of the chart to the least deprived decile on the right. The steepness of the slope represents the inequality in life expectancy that is related to deprivation in this local area. If there were no inequality in life expectancy as a result of deprivation, the line would be horizontal.

Life Expectancy Gap for Men: 10.8 years

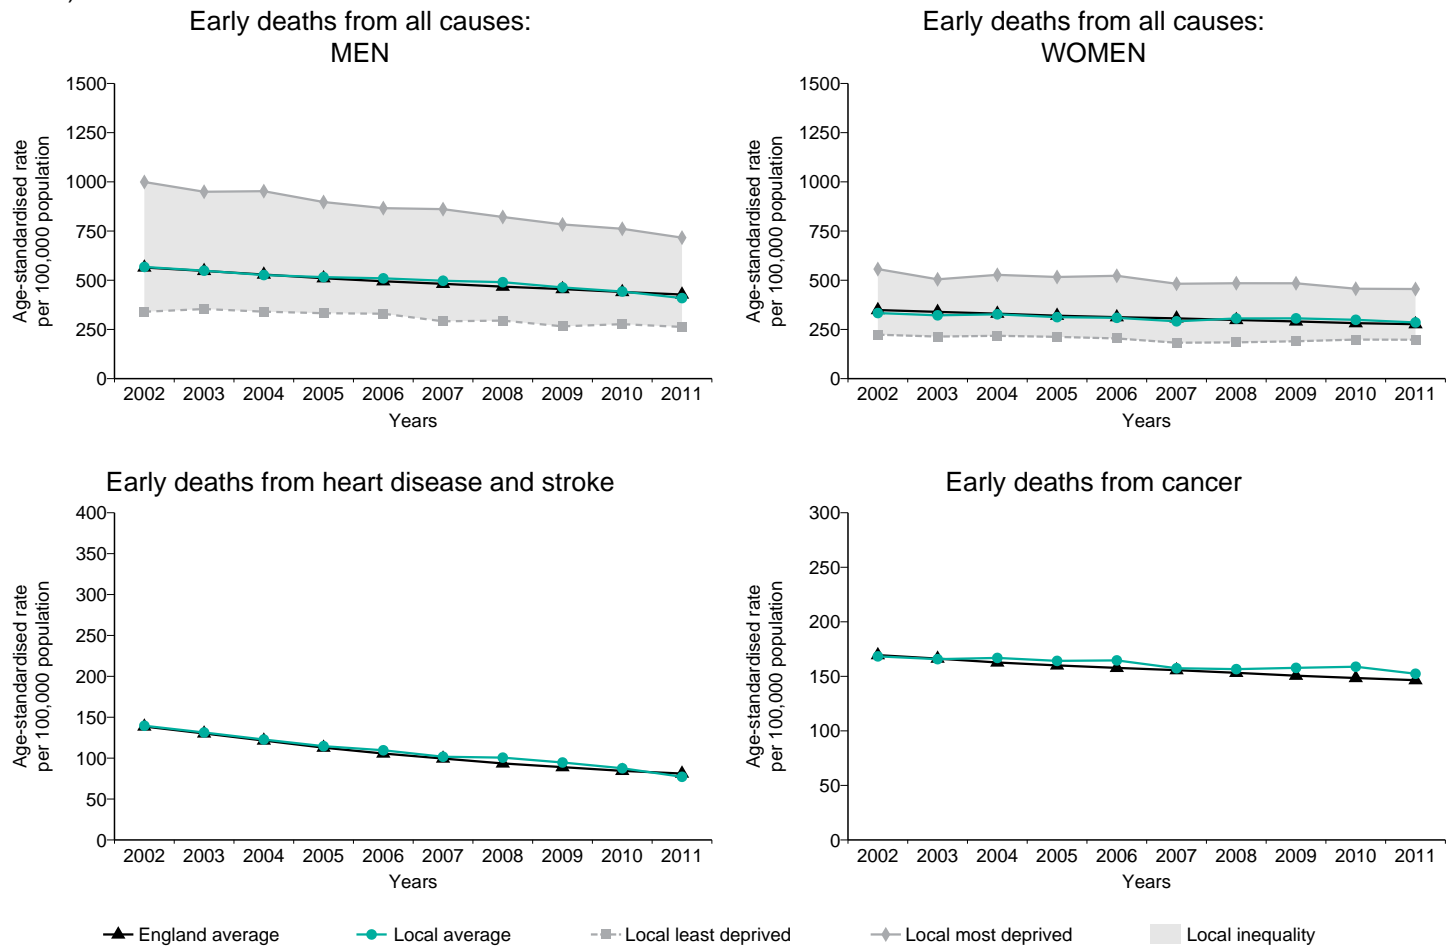

Life Expectancy Gap for Women: 8.4 years

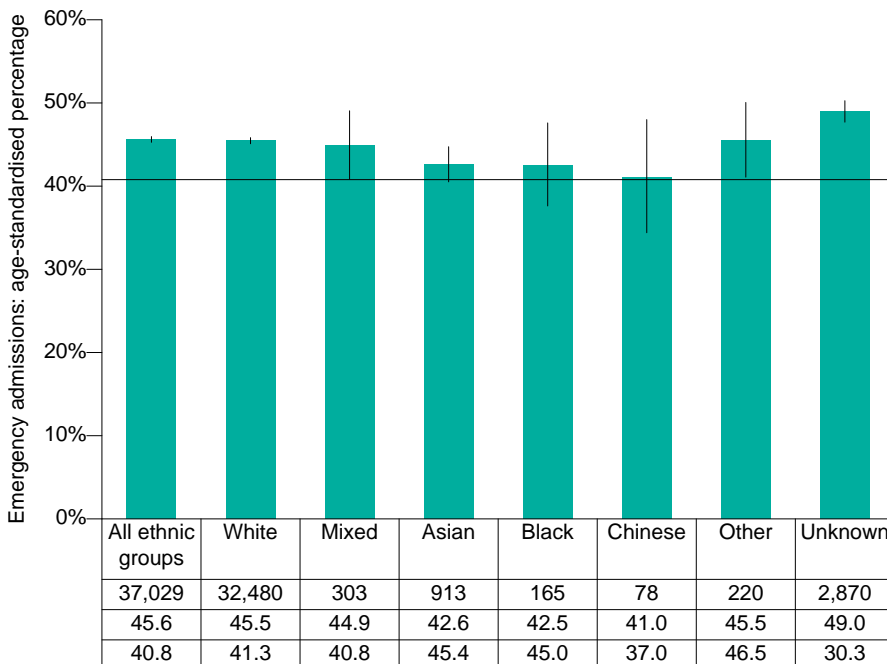

Health inequalities: changes over time

These charts provide a comparison of the changes in early death rates (in people under 75) between this area and all of England. Early deaths from all causes also show the differences between the most and least deprived quintile in this area. (Data points are the midpoints of 3 year averages of annual rates, for example 2005 represents the period 2004 to 2006).

Health inequalities: ethnicity

Percentage of hospital admissions that were emergencies, by ethnic group

This chart shows the percentage of hospital admissions in 2012/13 that were emergencies for each ethnic group in this area. A high percentage of emergency admissions may reflect some patients not accessing or receiving the care most suited to managing their conditions. By comparing the percentage in each ethnic group in this area with that of the whole population of England (represented by the horizontal line) possible inequalities can be identified.

■ Stockport
 — England average (all ethnic groups)
 | 95% confidence interval

Figures based on small numbers of admissions have been suppressed to avoid any potential disclosure of information about individuals.

Health Summary for Stockport

The chart below shows how the health of people in this area compares with the rest of England. This area's result for each indicator is shown as a circle. The average rate for England is shown by the black line, which is always at the centre of the chart. The range of results for all local areas in England is shown as a grey bar. A red circle means that this area is significantly worse than England for that indicator; however, a green circle may still indicate an important public health problem.

Domain	Indicator	Local No Per Year	Local value	Eng value	Regional average^		England Average		England Best
					Eng worst	25th Percentile	England Range	75th Percentile	
Our communities	1 Deprivation	36,418	12.8	20.4	83.8				0.0
