

Protecting and improving the nation's health

Stockport

Health Protection Profile

The Health Protection Profiles have been developed by Public Health England to support health protection teams, local authorities and public health leads describe and monitor health protection in their local population.

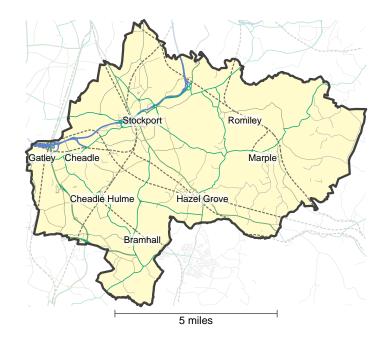

The profiles provide a snapshot of health protection across a range of topics including immunisation, sexually transmitted infections and TB. Other health protection indicators will be added as they become available.

This output report provides selected data presentations showing how your local authority compares to the England value and other local authorities in your region.

Please refer to the online tool for full detail of the metadata, accompanying advice and further presentations including interactive maps and other options for grouping and comparing your local authority.

Childhood Immunisation

1 Unknown 2 All children at age one who have received the completed course of MenC vaccine as a percentage of all children for whom the PCT is responsible whose first birthday falls within the time period. 3 Unknown 4 All children at age two years who have received one booster dose of Hib/MenC vaccine resident within each reporting area as a percentage of all children at age two years. 5 Unknown 8 All children at age five years who have received one booster dose of Hib/MenC vaccine resident within each reporting area as a percentage of all children at age five years. 9 Unknown 11 All girls aged 12 to 13 years who have received all three doses of the HPV vaccine within each reporting area (at present PCT responsible population) as a percentage of all girls aged 12 to 13 years within each area.

Infectious Diseases

12 All chlamydia tests (asymptomatic screens and symptomatic tests) undertaken in 15 to 24 year olds attending GUM clinics, primary care and community services who are residents in England. Data excludes people accessing services located in England who are residents in Wales, Scotland, Northern Ireland or abroad. The England total Includes tests which did not have sufficient location information to be attributed to a local authority of residence. 13 All chlamydia diagnoses in 15 to 24 year olds attending GUM clinics, primary care and community services who are residents in England, expressed as a rate per 100,000 population.

Data excludes people accessing services located in England who are residents in Wales, Scotland, Northern Ireland or abroad. The England total includes tests which did not have sufficient location information to be attributed to a local authority of residence. 14 All syphilis diagnoses among people accessing GUM services in England who are residents in Wales, Scotland, Northern Ireland or abroad. 15 All gonorrhoea diagnoses among people accessing GUM services in England who are residents in England, expressed as a rate per 100,000 population. Data exclude people accessing GUM services in England who are residents in England, expressed as a rate per 100,000 population. Data exclude people accessing GUM services in England who are esidents in England, expressed as a rate per 100,000 population. Data exclude people accessing GUM services in England who are esidents in England, expressed as a rate per 100,000 population. Data exclude people accessing GUM services in England who are esidents in England, expressed as a rate per 100,000 population. Data exclude people accessing GUM services in England who are esidents in England, expressed as a rate per 100,000 population. Data exclude people accessing GUM services located in England who are esidents in Uses, Scotland, Northern Ireland or abroad. 16 People aged 15 to 59 years who were seen at HIV care services. 17 Proportion of adults (aged 15 years or more) diagnosed with a CD4 cell count esist han 350 cells per mm³ among all newly diagnosed adults with CD4 cell count available within 91 days of diagnosis and with known residence based information. 18 The number of 'Eligible new GUM Episodes' where a HIV test was accepted as a proportion of those where a HIV test was offered. Multiple episodes of HIV test offer and uptake are included per individual within a year.

'Eligible new GUM Episode' is defined as a visit to a GUM clinic including all subsequent GUM attendances in the following six weeks (i.e. eligibility for testing occurs only once every six weeks). Attendances by known HIV positive patients¹, or where a HIV test was not appropriate² are excluded.

¹ E1B, E2B, E3A2, E3B, H, H2 ² P1C

Data exclude people accessing GUM services located in England who are residents in Wales, Scotland, Northern Ireland or abroad.

MSM includes men who reported a homosexual or bisexual orientation. For uptake of HIV testing, MSM is defined based on a patient's entire clinic attendance history (i.e. a man is classified as MSM for all attendance years including and following the earliest year a man identifies as MSM). 21 The three-year average number of reported new cases per year (based on case notification) per 100,000 population 22 Annual proportion of drug sensitive tuberculosis (TB) cases expected to complete treatment within 12 months who had completed treatment within 12 months of treatment start date (exclusions: cases with rifampicin resistance or MDR-TB, and cases with CNS, spinal, miliary or disseminated TB who may require longer than the standard 6 month treatment course) 23 Flu vaccine uptake (%) in at risk individuals aged 6 months to 65 years (excluding pregnant women), who received the flu vaccination between 1st September and 31st January in a primary care setting (GPs) 24 Flu vaccine uptake (%) in adults aged 65 and over, who received the flu vaccination between 1st September to 31st January in a primary care setting (GPs) 25 These data describe pneumococcal polysaccharide vaccine (PPV) uptake for the survey year, for those aged 65 years and over.
